

To Whom It May Concern,

During the month of May the Homer Fire Department members conducted their annual week of Spring Fire School. This is designed to capture many training topics and get the department together for a week-long event of training. This year Meridian Fire Training came and conducted a class specific to our Thermal cameras and the many uses of the piece of equipment beyond just finding heat signatures. Also this year Jerome Fire Equipment joined us and brought a presentation to the department, and surrounding departments that attended, on how our Firefighting Structural Gear is designed and built for the many applications it many encounter.

The department worked on getting equipment and tool mounting done on the new 511 apparatus. The truck is currently getting badging done and will be on display during the 2026 Fireman's Field Days before being put into service at the end of June.

The department is gearing up for a busy summer with local events that come every year to the Village of Homer.

Attached are the monthly reports for the month of May 2026.

Respectfully,

Nathan Stockwin
Fire Chief
